The Company is engaged in the exploration and development of mineral properties in North America and has not yet determined whether its properties contain ore reserves that are economically recoverable. The Company has not generated revenue from operations and will need to seek additional financing to meet its exploration and development objectives. These unaudited condensed consolidated interim financial statements ("Condensed Interim FS") do not include any adjustments relating to the recoverability and classification of recorded asset amounts and classification of liabilities that might be necessary should the Company be unable to continue in existence.

For the six months ended June 30, 2021, the Company reported a net loss of \$2,792,226 and as of that date the Company's deficit was \$7,984,274. The Company's net working capital position at June 30, 2021 was \$3,950,764, inclusive of marketable securities with a fair value of \$2,244,428. If the Company does not or cannot sell a portion or all of the marketable securities at current market values, it may have to raise additional funds to continue operations and to complete its future exploration programs. While the Company has been successful in the past in raising capital, there is no assurance that such financing will be available on a timely basis and under terms acceptable to the Company.

2. BASIS OF PREPARATION

9. FINANCIAL INSTRUMENTS AND RISK

Fair value

IFRS 7 establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value as follows:

Level 1 – quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The Company's financial instruments are comprised of cash and cash equivalents, marketable securities, receivables excluding GST and BC METC receivable, and accounts payable and accrued liabilities. The carrying value of receivables, reclamation bond and accounts payable and accrued liabilities approximate their fair values due to the relatively short periods to maturity of these financial instruments.

Financial instruments measured at fair value on the statement of financial position as at June 30, 2021 and as at December 31, 2020 are classified as Level 1.

Risk Management

The Company's risk exposures and the impact on the Company's financial instruments are summarized below:

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS For the six month period ended June 30, 2021 (Unaudited, Prepared by Management)

Credit risk

Credit risk is the risk of potential loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations. The Company's credit risk is limited to the carrying amount on the statement of financial position and arises from the Company's cash and cash equivalents, marketable securities, receivables and reclamation bond.

The Company's cash and cash equivalents and marketable securities are held through a Canadian chartered bank and brokerage firms, which are high-credit quality financial institutions. The Company's receivables primarily consist of exploration tax credits due from the B.C. Government and goods and services tax rebates due from the Government of Canada.

Liquidity risk

Liquidity risk is the risk that the Company will not meet its financial obligations as they fall due. The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As at June 30, 2021, the Company had a cash and cash equivalents of \$1,527,866 to settle current liabilities of \$54,694. All of the Company's financial liabilities have contractual maturities of 30 days or are due on demand and are subject to normal trade terms.

Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk may arise from changes in market factors such as interest rate, foreign exchange rate and price risks.

(a) Interest rate risk

The Company has cash balances and no interest-bearing debt. The Company's current policy is to invest excess cash in investment-grade short-term certificates of deposits issued by its banking institution. The Company periodically monitors the investments it makes and is satisfied with the credit ratings of its bank.

(b) Foreign currency rate risk

While the Company is domiciled in Canada and its capital is raised in Canadian dollars, a portion of its business is conducted in the United States of America. As such, it is subject to risk due to fluctuations in the exchange rate between the Canadian and US dollars. Management believes the foreign exchange risk derived from currency conversions is insignificant and therefore does not hedge its foreign exchange risk.

(c) Price risk

Price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market prices, other than those arising from interest rate or foreign currency risks. At June 30, 2021, the Company had marketable securities with a fair value of \$2,244,428. A ±10% change in the share prices would affect the Company's consolidated financial statements by approximately \$224,443.

The net realizable values of the Company's marketable securities are also subject to impairment resulting from insufficient market liquidity. The extent of such potential impairment is not readily determinable.

The Company monitors its capital structure and makes adjustments according to market conditions in an effort to meet its objectives given the current outlook of the business and industry in general. The Company manages its capital structure by issuing new shares, adjusting capital spending or disposing of assets. In addition, management of the Company's capital structure is facilitated through its financial and operational forecasting processes. The forecast of the Company's future cash flows is based on estimates of capital and operating expenditures, and other investing and financing activities. The forecast is regularly updated based on changes that the Company views as material to the accuracy of the forecast.
